

8 Reasons to Automate your Email Archive Migration to Office 365

100 times faster

Highly scalable migration tasks that can be run 24x7 with minimal monitoring.

Successfully transfer **99.9%** of all your data

One Step Process

Eliminate temporary storage and directly copy data from the archive to the Office 365. Any corrupt, missing or invalid data is logged and triaged while the tool continues to migrate your archives.

Focus on what you do best

Limited monitoring and minimal admin impact mean your IT team can focus on larger operational goals. During migration, data is read directly from archive application database with little to no impact on access. User experience is key. Your people will thank you.

Maintain Chain of Custody

The only way to ensure you have a defensible migration and meet all your legal and compliance requirements is to automate your migration. The automated tools will provide full audit logging and chain of custody.

Full Reporting

Ditch the spreadsheets and endless email chains! Automation allows access to detailed progress reports with a complete log of all migrated data - including any troublesome data that may need further attention. Information at your fingertips.

Take the load off your archive application

Insentra's Migration Service reads data directly from your archive with little to no performance impact. A manual migration however, places great strain on performance of archives due to the way in which the process works.

Let the **experts** assume the risk and own the agreed outcomes
